

FAHR Launches the “Insight System” for Federal HR Indicators

In this context, His Excellency Faisal binbuti Al Mheiri, Director General of the FAHR, stated that the “*Insight*” system represents a qualitative addition that supports the Authority’s efforts in advancing the UAE Government’s vision towards achieving digital zero bureaucracy, strengthening HR data governance and maturity across the federal government, and providing smart tools to analyze HR indicators. It also enables federal entities to customize reports according to the nature of their work and specific needs, thereby enhancing their capacity to make strategic decisions grounded in precise and trustworthy data.

He noted that “*Insight*” is an enhanced version of the Smart Reporting System derived from the “*Bayanati*” Federal Government Human Resources Information Management System—one of the FAHR’s strategic projects. It is built upon the latest artificial intelligence and digital transformation technologies and serves as a highly reliable main reference for generating statistical reports related to human capital indicators within the UAE Federal Government.

About “Insight”

The upgraded “*Insight*” system is designed to assist officials in making strategic decisions based on accurate and dependable data, thereby enhancing the efficiency and effectiveness of the federal human resources framework. It serves as an innovative analytical tool that leverages advanced technologies to analyze data, provide real-time reports, and deliver strategic insights that sustainably support decision-making. This aligns with the UAE’s vision for achieving governmental excellence and reinforces its global competitiveness as a leading hub for digital transformation applications.

Among the system’s key features is its ability to allow federal entities to customize statistical reports in line with their specific requirements—enhancing their capability to monitor and analyze their respective human capital indicators.
