

FAHR Wins the UAE Artificial Intelligence Award for Its Project “HR AI Agent”

The project is an intelligent platform based on generative AI technologies, designed to create a qualitative transformation in automating government HR services. The system enables more than 50,000 government employees across over 40 federal entities to complete more than 80% of inquiries and administrative transactions through over 100 smart services, thereby enhancing operational efficiency and enriching the government employee experience.

This achievement reaffirms the FAHR’s commitment to adopting artificial intelligence as a strategic instrument for advancing the government work ecosystem and designing innovative, human-centered solutions, in line with the directives of the visionary leadership and the UAE’s vision of global leadership in digital government transformation.
